SUPPLEMENTAL ACTION

1. Claims 112—131 are pending. Claims 112, 119, 122, 124, 128, 129, and 131 have been amended in this communication filed 6/17/08 entered as Amendment and RCE.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 06/17/08 has been entered.

Allowable Subject Matter

Claims 112-131 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art is (US 6,353, 818) Carino, Jr.. Carino, Jr. discloses a method and apparatus with an optimizer for optimizing database queries and query plans for executing queries with a dispatcher coordinating execution of sending the results from the commands to a requesting client but fails to disclose Applicant's apparatus for a redirector responding to a query analyzer determining that a request includes a specifier which cannot be interpreted in a first database system by causing the request to be executed in part in the second database system with the request being executed in the first database

system when the query analyzer does not determine the request includes the specifier which cannot be interpreted in the first database system in claims 112 and 125, claims 119, 124, and 131 have a method and a memory device for determining whether the request includes a specifier which cannot be interpreted in the first database system causing the request to be executed in part in the second database system when the request includes the specifier which cannot be interpreted in the first database system and claim 128 with a method for determining whether the received request includes a specifier that cannot be interpreted in the second database system and causing the request to be executed in part in the first database system instead of the second database system when the request includes the specifier that cannot be interpreted in the second database system. Bogantz et al. (US 6,243,715) discloses a database querying system which requests data from any of the databases and after the commit transaction has been processed the accessed database will return the old data but fails to disclose Applicant's apparatus for a redirector responding to a query analyzer determining that a request includes a specifier which cannot be interpreted in a first database system by causing the request to be executed in part in the second database system with the request being executed in the first database system when the query analyzer does not determine the request includes the specifier which cannot be interpreted in the first database system in claims 112 and 125, claims 119, 124, and 131 have a method and a memory device for determining whether the request includes a specifier which cannot be interpreted in the first database system causing the request to be executed in part in the second database system when the request includes the

specifier which cannot be interpreted in the first database system and claim 128 with a method for determining whether the received request includes a specifier that cannot be interpreted in the second database system and causing the request to be executed in part in the first database system instead of the second database system when the request includes the specifier that cannot be interpreted in the second database system. Souder et al (US 5,806,074) discloses a first data structure and a second data structure in a distributed database system but failed to disclose Applicant's apparatus for a redirector responding to a query analyzer determining that a request includes a specifier which cannot be interpreted in a first database system by causing the request to be executed in part in the second database system with the request being executed in the first database system when the query analyzer does not determine the request includes the specifier which cannot be interpreted in the first database system in claims 112 and 125, claims 119, 124, and 131 have a method and a memory device for determining whether the request includes a specifier which cannot be interpreted in the first database system causing the request to be executed in part in the second database system when the request includes the specifier which cannot be interpreted in the first database system and claim 128 with a method for determining whether the received request includes a specifier that cannot be interpreted in the second database system and causing the request to be executed in part in the first database system instead of the second database system when the request includes the specifier that cannot be interpreted in the second database system.

An extensive search of the applicable prior art was done but showed no better reference.

For these reasons claims 112-131 are deemed to be allowable over the prior art of record.

It appears that the instant invention is beyond the skill of one of ordinary skill in the art. Accordingly the invention would NOT have been obvious because one of ordinary skill could not have been expected to achieve it, NOR would they have been able to predict the results, and as such, they would have had no capability of expecting success.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
